

Digitel Wireless Announces "Hydra EMS™ for Cisco Navini RipWave

HYDRA adds great functionality to Cisco - Navini EMS

Atlanta, GA--(MarketWire)--May 27, 2008---Today, Digitel Wireless ("Digitel"), a division of the Digitel Corporation, announced a partnership agreement with Hydra Labs. Hydra Lab's, working with Digitel Wireless, has developed an innovative **WEB Based UI for the Cisco / Navini EMS** which also integrates with many popular billing and OSS platforms, specifically, Ridopi and Modern Bill.

Hydra EMS is a hosted application, which greatly enhances the operator experience of managing the Cisco Navini EMS as well as providing modem management. **Hydra EMS™** also integrates with our remote monitoring system (**RMS**), named "**DigiLINC™**." Together, these two (2) applications integrate with into commonly used industry leading OSS and billing applications, including both Rodopi www.rodopi.com and ModernBill www.modernbill.com, and works with both the licensed and unlicensed Navini EMS. <http://www.navini.com/index2.html>

Hydra EMS, along with DigiLINC™, Digitel Wireless, provides an integrated Resource Management Application (**RMA**) platform for the management of both large and small networks, scalable to over 20,000 subscribers.

"With the introduction of these hosted network application tools, Digitel Wireless can provide an online, fully hosted platform for the rapid deployment, implementation, and management of wireless broadband networks, while providing cost effective management of physical and logical resources, as well as management of all assets in the network," stated John Overely, Digitel Wireless's Director of Sales and Business Development. Overley continued, "We are very excited about working with Hydra Labs and the benefits HYDRA will bring to all Navini operators around the world."

Hydra Labs founder, Jacob Feisley, commented, "We are thrilled to be working with Digitel Wireless. Their team has the ability to bring our applications to market, not only in North America, but all over the world."

#####

About Digitel Wireless - a division of Digitel Corporation founded in 1983, was formed to design and deliver state of the art broadband WIMAX wireless infrastructure equipment and services for the rapidly expanding wireless broadband Rural and Metro Municipal markets. Digitel Wireless brings a combined 50 years of experience in the delivery of professional IT services for Voice, Data, IP, and Wireless infrastructure & related services through its partners or through resources available from other divisions of the Digitel Corporation.

About Hydra Labs – was founded in 2006 to produce web solutions to allow monitoring and management of systems from any networked device. Their goal is to release people from the bonds of traditional software that is tied to a single computer. Hydra Labs' experience in mobile broadband combined with their state of the art software, allow them to develop management solutions that are far superior to existing systems.
